

SRIJA

Rsrijareddy@outlook.com | Denton, TX

PROFESSIONAL SUMMARY

Data professional with 3+ years of experience designing scalable data pipelines, analytics systems, and predictive models across cloud ecosystems (AWS, GCP, Azure). Experienced in building end-to-end data solutions spanning ETL/ELT pipelines, data modeling, warehousing, and real-time analytics. Proven ability to process 5M+ records, optimize data workflows, and reduce processing latency from hours to near real-time while delivering insights that improve operational efficiency and decision-making.

TECHNICAL SKILLS

Languages & Analytics: SQL, Python (Pandas, NumPy, Scikit-learn), Java, R, Statistical Modeling, Forecasting
Data Engineering: ETL/ELT Pipelines, PySpark, Data Modeling, Data Warehousing, Hive, BigQuery, Snowflake, Databricks

Machine Learning: Regression, Classification, XGBoost, Demand Forecasting

Visualization & BI: Tableau, Power BI, KPI Dashboards, Executive Reporting

Cloud Platforms: AWS, GCP, Azure

Databases: MySQL, SQL Server, Oracle, MongoDB

Tools & Practices: Git, Agile, Stakeholder Management, Cross-functional Collaboration

WORK EXPERIENCE

Data & Operations Analyst Intern | RS Americas – Fort Worth, TX

June 2025 – August 2025

- Engineered a centralized data reporting system by consolidating 20+ fragmented global safety datasets, reducing tracked action items by 38% and eliminating reporting silos.
- Designed and deployed a mobile QR-based event reporting system, increasing adoption by 25% across distributed operational teams.
- Developed executive-level KPI dashboards enabling real-time operational visibility and faster decision-making.
- Standardized reporting pipelines and documentation frameworks, improving data quality and cross-team consistency.

Data Engineer | Virtusa Consulting Services – India

June 2021 – June 2024

- Processed and analyzed 5M+ operational and customer records using SQL and Python to generate insights for business strategy and forecasting.
- Architected ETL/ELT pipelines integrating 10+ heterogeneous data sources, improving data accuracy by 30% and enabling scalable analytics workflows.
- Built enterprise Power BI dashboards enabling self-service analytics and increasing stakeholder adoption across business units.
- Developed regression and machine learning models for demand and revenue forecasting, improving planning accuracy for business cycles.
- Optimized complex SQL queries and redesigned relational database structures (Oracle, MySQL, SQL Server), reducing reporting latency by 40%.

PROJECTS

- Healthcare Data Pipeline & Real-Time Analytics** (GCP, Hive, PySpark, Power BI): Engineered an end-to-end scalable data pipeline processing 1M+ CDC records for population health analytics. Reduced batch processing latency from hours to near real-time streaming, achieving sub-second query response for downstream insights.
- Traffic Crash Severity Prediction & Vision Zero Analysis** (Python, SQL, Pandas, XGBoost): Built machine learning models on 227K+ Austin crash records to identify key risk factors influencing severity outcomes. Evaluated Vision Zero policy effectiveness through feature importance analysis, delivering actionable insights for public safety and infrastructure prioritization.

- **Return Product Analysis Dashboard** (Python, SQL, Tableau): Developed an end-to-end analytics dashboard to identify return behavior patterns across product categories, reducing manual review effort by 35% and improving inventory decision-making efficiency.
- **Online Gaming Behavior Dashboard** (Power BI, SQL): Analyzed user engagement and retention metrics to identify behavioral drivers, contributing to a 12% improvement in user retention through data-driven product insights.

EDUCATION

Master of Science in Information Systems | University of North Texas | GPA: 4.0 / 4.0 | Graduated May 2026

CERTIFICATIONS

- AI Fluency: Framework & Foundations – Anthropic
- Oracle Data Platform 2025 Certified Foundations Associate
- Oracle Certified Associate, Java SE 8 Developer
